

YANG LI

Lead Software Engineer | Java · Python · AWS · Distributed Systems

victorlee2012.vl@gmail.com | Glasgow, UK | [LinkedIn](#)

PROFILE

Lead Software Engineer with 20+ years of experience building resilient, high-throughput distributed systems across financial services, wealth management, and enterprise platforms. Combines a deep foundation in enterprise Java (including 8 years at J.P. Morgan architecting trading systems for equity and credit derivatives) with recent years focused on Python, Platform Engineering Developer experience, and GenAI agentic flow engineering at Barclays. Brings a proven track record of designing scalable distributed applications, driving operational excellence, and leading cross-functional engineering teams in regulated financial environments.

Specialised in: Java & Python Distributed Systems | AWS Cloud Architecture | Agentic ADLC Tooling (Claude Code, MCP, Custom Agents) | Platform & SRE Engineering | Financial Services Domain | Engineering Leadership

TECHNICAL SKILLS

Languages & Core Engineering

- Languages: Java (10+ years), Python (4+ years, recent focus), C/C++, SQL; (Proficient) TypeScript, Rust (learning)
- API Architecture: RESTful API design (Swagger/OpenAPI), distributed messaging, event-driven architectures
- Distributed Systems & Messaging: Microservices, Kafka (basic knowledge), high-frequency trading platforms, resilient service design

Cloud & Infrastructure

- Cloud: AWS (EC2, RDS, S3, Lambda, ECS, EKS, ECR)
- Infrastructure as Code: Terraform (hands-on/proficient), CloudFormation (learning)
- Containerisation: Docker, Kubernetes, Red Hat OpenShift

CI/CD & Automation

- CI/CD Platforms: GitLab CI/CD (proficient), GitHub Actions, Jenkins, TeamCity
- Automation: Python, Bash, Groovy, PowerShell

Agentic AI & ML Tooling

- Agentic ADLC: Claude Code, MCP tool development, custom AI agent & SKILL development, Copilot-style developer workflows
- AI Integration: LLM API orchestration, RAG systems, LangFlow, Ollama (Llama 3, Mistral)
- Vector Databases: FAISS, Weaviate, ChromaDB, Pinecone, AWS OpenSearch

Observability & Reliability

- Monitoring & Logging: ELK Stack, Prometheus, Grafana, Tableau, OpenTelemetry (OTEL)
- Databases: MS SQL Server, Oracle, AWS RDS, vector databases; Liquibase (schema migrations)

WORK EXPERIENCE

BARCLAYS | Glasgow, UK

Platform Engineer / Senior Software Developer | May 2025 – Present (12+ months)

- Build and maintain GitLab CI/CD developer platform serving 50+ engineering teams with 500+ daily pipeline executions, reducing deployment failure investigation time by 85% (2+ hours → <15 minutes) through automated log analysis and intelligent root cause detection
- Delivered production agentic ADLC tooling using Claude Code, custom MCP integrations, and AI SKILL development, accelerating developer productivity and automating deployment workflows across engineering teams — directly aligned with JPMorganChase's agentic pipeline engineering practice

- Developed Python-based release automation framework, cutting evidence collection and audit trail generation from 3.5 hours to 1 hour per release
- Co-developed Python-based security automation integrating Wiz vulnerability scanning covering 5,000+ repositories, reducing critical security exposure window from 14 days to <48 hours
- Provisioned Coder cloud development environments via Terraform on AWS EC2; optimised Docker workspace images from 11+ GB to 500 MB (UBI9-micro base), reducing per-workspace cloud resource consumption by ~95%
- Project-managed CIO deck automation for GFED Technology (Jun–Aug 2025), leading a team of interns from requirements to implementation; reduced manual effort from 20 hours to 2 hours (90%) and navigation clicks from ~215 to 50 (76%)

Senior Software Developer | Enterprise Architect | Nov 2024 – Apr 2025 (6 months)

- Led GenAI experimentation initiative using locally-hosted Ollama models (Llama 3, Mistral), eliminating cloud API costs (~\$5K/month) while maintaining data security compliance in a regulated banking environment
- Automated weekly assets dependency mapping across 15 business units using Python, eliminating manual tracking efforts and reducing architectural audit cycle times
- Developed POC LangFlow-based AI workflows for automated tech asset discovery across 500+ enterprise applications
- Promoted AI-native development practices through demos and knowledge-sharing, upskilling engineers on prompt engineering, RAG systems, and local LLM deployment

Senior Developer & Technical Team Lead | Plan & Invest | Apr 2022 – Nov 2024 (2.5 years)

- Accelerated backend release cadence from quarterly to monthly (4× improvement) by designing decoupled distributed service architecture for the Plan and Invest platform serving 100K+ wealth management clients
- Designed an API monitoring framework using Java AOP + OTEL + ELK to link logs from different services together and trace requests end to end, reducing L3 support response time from 45 min to <10 min and eliminating 80% of test environment outages through proactive alerting
- Led a GenAI hackathon team of 8 engineers to prototype a personalised wealth management assistant orchestrating LLMs on AWS to automate complex banking workflows
- Recruited and onboarded hire-to-desk engineers with zero prior system knowledge, achieving full productivity within 1 quarter through structured knowledge transfer and training

Senior Java Developer & Technical Team Lead | Little Book of Wonders, Barclays One | Nov 2016 – Apr 2022 (5.5 years)

- Drove AWS cloud migration for Little Book of Wonders testing environments, achieving 99.8% deployment success rate and reducing environment spin-up time from 2 days to 4 hours
- Led development of critical Java backend features growing customer base 3× (30K → 90K users) while maintaining 99.9% uptime and sub-200ms API response times
- Promoted to dual-team technical lead (2018) managing 12 engineers across public websites and backend Java microservices

J.P. MORGAN | Glasgow, UK

Senior Associate & Tech Lead | Jan 2007 – Apr 2015 (8 years)

- Architected Java-based high-frequency trading platforms for equity and credit derivatives, processing 10,000+ transactions/day with <5ms latency SLA — prime finance domain expertise directly applicable to Prime Finance Services
- Led Platform Trading System (PTS) team as junior Tech Lead (2013–2015), managing 4 developers and delivering 12+ major features annually
- Designed and maintained resilient distributed applications across global infrastructure, contributing to performance tuning, fault tolerance, and operational stability in high-stakes financial systems
- Acquired Financial Derivatives Certification (Chartered Institute For Securities & Investment), building domain expertise spanning technical implementation and business requirements
- Promoted twice (2008 Professional → Associate; 2013 Associate → Senior Associate) for exceptional technical delivery in a fast-paced, high-volume financial engineering environment

**ADVANTAGE ENERGY SOLUTIONS LTD (AESL) |
Edinburgh, UK**

Software Engineer | Feb 2004 – Jan 2007

- Drove software development process maturity by implementing version control (SVN), CI pipelines, and localisation framework, reducing deployment errors by 60%
- Built and maintained customer-facing web platform using C++, XML, XSLT on Windows Server, serving 500+ energy consulting clients across 5 countries

EDUCATION

University of Strathclyde | Glasgow, UK Master of Business Administration (MBA) – Distinction | Oct 2018 – Jul 2022

- Research: Hybrid workforce productivity optimisation post-pandemic

University of Glasgow | Glasgow, UK MSc, Electrical & Electronic Engineering | Oct 2002 – Jul 2003

- Thesis: Autonomous robot fleet for disaster recovery using C/C++ (legOS)

Donghua University | Shanghai, China BSc, Industrial Automation Engineering | Oct 1998 – Jul 2002

- Capstone: Fuzzy logic control system outperforming neural network approach

KEY ACHIEVEMENTS & CERTIFICATIONS

- **J.P. Morgan Alumni:** 8-year tenure at JPMC building Java distributed trading systems for equity and credit derivatives; returning with 10+ additional years of cloud, AI/ML, and platform engineering leadership
- **Agentic ADLC (Production):** Built Claude Code integrations, MCP tooling, and custom AI agents (Claude SKILL) at Barclays
- **GitLab CI/CD at Scale:** Designed and scaled CI/CD automation serving 50+ engineering teams at Barclays; contributed to enterprise-wide GitLab Ultimate migration. [Barclays PLC case study](#)

- **Financial Derivatives Certification** (CISI, 2010)
- **Speaker/Blogger:** Active technology blog since 2016 — edisonideas.wordpress.com — covering AI, DevOps, and platform engineering
