Dear Hiring Manager,

I am writing to express my strong interest in the Lead Software Engineer opportunities within JPMorgan Chase in Glasgow.

My background spans three disciplines that are usually separate: software engineering (Java, Python, C++, distributed systems), platform and DevOps engineering (CI/CD at scale, AWS, Openshift, Terraform, Ansible, Helm), and applied GenAI (Claude Code, MCP tooling, Agentic solutions like Claude Skills — in production at Barclays). That breadth means I can either architect a GenAI solution end-to-end or lead a cross-functional team of software, AI, and DevOps engineers in the same language they each speak. You can find examples of my recent personal projects on my GitHub repository: <https://github.com/ly2xxx/>. The JPMC alumni background — eight years building distributed financial systems in Glasgow — means I hit the ground running on culture, standards, and domain.

On motivation: I've invested heavily in staying at the frontier of Generative AI engineering over the past three years, and I want to make sure my next role keeps pace with that. The direction JPMC is taking in this space is exactly where I want to be, and I don't want to let that edge go stale in a role that doesn't use it.

One thing worth mentioning: having mentored and led graduate internship groups over the years, I've built a strong network within the Glasgow engineering community. And a move like this often brings excellent engineers along.

I look forward to discussing how my technical breadth and leadership experience can contribute to your team.

Best regards,

Yang Li
